

How to enable "ODBC Server" for Tally6.3, Tally7.2 to Tally 9

Reasons for disabled "ODBC Server"

- Tally application opened more than one time.
 - ODBC Server will be enabled **only** for first instance of Tally. Hence other instances of Tally will run without ODBC server.
- More than one Tally applications running on same port for different versions (ex. Tally 7.2 as well as Tally.ERP is same time running)
 - Change Server port in Tally.ini and restart Tally (Steps provided below in this document)
- Tally 7.2 License Server is running as background service.
 - Permanent solution: Setup new folder for License Server with new port.
 - Temporary Solution:
 - Uninstall Tally License Server using "tallylicserver.exe" file.
 - Caution: other users from LAN cannot access license if license server is uninstalled. You must have to keep running Tally on server PC.
 - Or end process of "Tally72.exe" using "End Process" button from Task Manager's Processes Tab.
- Tallywin.Dat file missing from Tally folder (see image given below)
 - Copy "Tallywin.Dat " file to Tally installation folder & restart Tally
- Settings to be corrected in Tally.ini file:
 - Port not provided OR to be changed in Tally.ini file
 - Different config path given in Tally.ini instead of same folder's path.

Steps to add port in Tally.ini (Configuration settings file)

1. Close all Tally instances of Tally.
2. Open Tally installed folder (Right click on Tally's icon → Click Property → Click "Find Target" or "Open File Location")
3. Double click on "Tally.ini" file name (Configuration settings file):

Name	Type	Size
spnsrvnt.exe	Application	156 KB
stat.slk	Microsoft Office Exc...	4,043 KB
Tally.ini	Configuration settings	1 KB
tally72.exe	Applicatio	7,084 KB
tallylic9xserver.exe	Applicat	60 KB
tallylicserver.exe	Application	60 KB
tallylicserver.log	T	1 KB
tallysav.dat	DAT File	16 KB
tallywin.dat	DAT File	112 KB

Open "Tally.ini" file

"tallywin.dat" file must be available

4. Enter Server Port (You can enter any port number between 9001 and 9998 any number)
 - a. If there is no line available for "Server Port"
 - i. Add new line as "Server port=<number>"
 - b. Or change server port number for example Server Port=9786
5. Check whether Config Path is correct.
6. Save changes and close file.

```

Tally.ini - Notepad
File Edit Format View Help
;; Specify location of TALLY.SAV (saved configuration of Tally)
Config = C:\Tally7.2
;; Specify Color details of local monitor
Color = Yes
Server Port=9786
;; end-of-file
  
```

Server Port=9786

7. Open Tally again.

Now "ODBC Server" is enabled
